SUMMARY

Backend Software Engineer seeking growth in the R01 target occupation.

EDUCATION

B.Eng. Computer Engineering, Example University, 2019

EXPERIENCE

Software Engineer, Example Commerce Co., Ltd., 2021-present

Junior Developer, Example Startup, 2019-2021

KEY ACHIEVEMENTS AND SKILLS

- Built and deployed a Python programming service for batch data processing used by 40 internal teams.
- Configured Linux servers and set up computer systems networks for the staging and production environments.
- Maintained operating system images and server hardware inventory for 120 Linux and Windows hosts.
- Designed an ETL pipeline that transformed data from five source systems into a PostgreSQL warehouse.
- Diagnosed production problems during on-call rotations and applied problem solving to restore service within SLA.
- Debugged memory leaks in a Java microservice and resolved the incident by performing root cause analysis with heap dumps.
- Led the system design of an event-driven order service and wrote the technical design document reviewed by architects.
- Designed databases and REST APIs for a new loyalty application from scratch.
- Wrote documentation and runbooks for deployment procedures that reduced onboarding time for new engineers.
- Set up observability dashboards and alerting in Grafana and monitored systems for latency regressions.
- Ran benchmarking and load tests to measure system performance before each quarterly release.
- Analyzed API latency data and query plans to identify slow endpoints, improving p95 response time by 35 percent.
- Coordinated with product owners and QA peers in daily stand-up meetings to report progress and blockers.
- Organized sprint backlog grooming and prioritized technical debt items with the team lead.
- Performed impact analysis and data flow modelling before migrating the monolith billing module.
- Read specifications and RFC documents to implement OAuth 2.0 and OpenID Connect correctly.
- Completed course: AWS Cloud Practitioner Essentials (online, 2025).
- Coursework in statistics and linear algebra during the B.Eng. program.
- Familiar with code review checklists and audit logging requirements.
- Skills: critical thinking, teamwork, time management.
- Helped maintain the release schedule calendar for the platform team.
- Participated in architecture meetings where the team selected approach options for caching.
